In vacuum tubes and gas-filled tubes, a hot cathode or thermionic cathode is a cathode electrode which is heated to make it emit electrons due to thermionic emission.This is in contrast to a cold cathode, which does not have a heating element.The heating element is usually an electrical filament heated by a separate electric current passing through it. Hot cathodes typically achieve much ...

Hot cathode - Wikipedia

A cathode is the electrode from which a conventional current leaves a polarized electrical device. This definition can be recalled by using the mnemonic CCD for Cathode Current Departs.A conventional current describes the direction in which positive charges move. Electrons have a negative electrical charge, so the movement of electrons is opposite to that of the conventional current flow.
