I'm creating this thread to consolidate a lot of the information that is floating around about the 3.4l superchargers. I will continually add to this thread as I find more info, but will start it off with @BigFishAllDay 's amazing post that started in @rickashay 's build thread. I have recently acquired a supercharger with no mounting hardware and will update the thread to include where I ...

Engine knock arises from auto-ignition of the end gas ahead of the propagating flame. Fig. 2 presents the pressure trace, pressure oscillation, heat release rate (HRR) and unburned gas temperature (T) of a typical knocking case. The combustion process of the knocking case has two stages: flame propagation induced by spark ignition and end-gas auto-ignition causing pressure oscillation.
