Intermediate Value Theorem. If  $f$  is continuous on a closed interval, and  $y$  is any number between  $f(a)$  and  $f(b)$  inclusive, then there is at least one number  $c$  in the closed interval such that  $f(c) = y$ . The theorem is proven by observing that  $f$  is connected because the image of a connected set under a continuous function is connected, where  $f(I)$  denotes the image of the interval  $I$  under the function  $f$ .

Probability is the measure of the likelihood that an event will occur. See glossary of probability and statistics. Probability quantifies as a number between 0 and 1, where, loosely speaking, 0 indicates impossibility and 1 indicates certainty. The higher the probability of an event, the more likely it is that the event will occur.
