MySQL :: MySQL 8.0 Reference Manual :: 15 The InnoDB ...

InnoDB is the default storage engine as of MySQL 5.5.5 (The CREATE TABLE statement in MySQL 5.5 creates InnoDB tables by default.) MySQL uses a pluggable storage engine architecture that enables storage engines to be loaded into and unloaded from a running MySQL server.

MySQL :: MySQL 5.5 Reference Manual :: 15 Alternative ...

I am using mysql and mysql workbench. I created 5 tables with innodb engine. I checked their engine and it was innodb before I insert data into them. I inserted data from 5 MyISAM tables and now my innodb tables are MyISAM. I can't change them. I used the alter table engine=innodb but it doesn't work.

database - Changing Table Engine in MySQL - Stack Overflow

Summary: in this tutorial, we will show you how to create a new table in a database by using the

MySQL CREATE TABLE statement.. MySQL CREATE TABLE syntax. To create a new table within a database, you use the MySQL CREATE TABLE statement. The CREATE TABLE statement is one of the most complex statements in MySQL.. The following illustrates the syntax of the simplified version of the CREATE TABLE ...

MySQL CREATE TABLE Statement By Examples

The MERGE engine is an exceedingly effective way of querying data from multiple, identically defined, tables. The MEMORY engine is the best way to perform a large number of complex queries on data that would be inefficient to search on a disk based engine. The CSV engine is a great way to export data that could be used in other applications.

MySQL :: MySQL 5.7 Reference Manual :: 14 The InnoDB ...

About MySQL database engines. Database engines provide the underlying functionality for MySQL to work with and process data. The two most common and popular MySQL database engines are MyISAM and InnoDB. MyISAM is the default engine for MySQL for versions earlier than 5.5.5, and functions well in most scenarios.

Working with MySQL database engines - A2 Hosting

These are MyISAM, which is the default MySQL storage engine, or InnoDB, which is an alternative engine built-in to MySQL intended for high-performance databases. Before we can understand the difference between the two storage engines, we need to understand the term "locking." ... If you need to revert the table engines back for any reason ...

MySQL Performance: MyISAM vs InnoDB | Liquid Web

This is a comparison between the available database engines for the MySQL database management system (DBMS). A database engine (or "storage engine") is the underlying software component that a DBMS uses to create, read, update and delete (CRUD) data from a database.

Comparison of MySQL database engines - Wikipedia

In MySQL, databases don't have an engine type; tables have engine types. The Friendly Manual even explicitly states:. It is important to remember that you are not restricted to using the same storage engine for an entire server or schema: you can use a different storage engine for each table in your schema.

How can I check MySQL engine type for a specific database ...

How would I show all tables in MySQL with a given engine, e.g. InnoDB, MyISAM, FEDERATED?

Show tables by engine in MySQL - Stack Overflow

The developer of the Federated Storage Engine states that "The Federated Storage Engine is a proof-of-concept storage engine", but the main distributions of MySQL version 5.0 included it and turned it on by default. Documentation of some of the short-comings appears in "MySQL Federated Tables: The Missing Manual".

MySQL - Wikipedia

The storage engine is specified at the time of the table creation. `mysql> CREATE TABLE Cars(Id INTEGER PRIMARY KEY, Name VARCHAR(50), -> Cost INTEGER) ENGINE='MyISAM';` The ENGINE keyword specifies the storage engine used for this particular table. If we do not specify the storage engine explicitly, then the default storage engine is used.

MySQL storage engines - InnoDB, MyISAM, Memory

What are reasons *not* to use the MEMORY storage engine in MySQL? ... Mysql's Table uses 575mb of RAM. The table only has a single index so i don't think that it is the main factor. Conclusion: Memory table is not an option for "big" tables because it uses too much memory.
