A partial differential equation (PDE) is a differential equation that contains unknown multivariable functions and their partial derivatives. (This is in contrast to ordinary differential equations, which deal with functions of a single variable and their derivatives.) PDEs are used to formulate problems involving functions of several variables, and are either solved in closed form, or used to ...

The electromagnetic wave equation is a second-order partial differential equation that describes the propagation of electromagnetic waves through a medium or in a vacuum. It is a three-dimensional form of the wave equation. The homogeneous form of the equation, written in terms of either the electric field  $E$  or the magnetic field  $B$ , takes the form:  $(\nabla^2 - \partial^2/\partial t^2) = (\nabla^2 - \partial^2/\partial t^2) =$

I'd been told that the review samples had been used at a show, and had also been played at MoFi's headquarters; nonetheless, their sound benefited from break-in. Over a period of several weeks, playing music as well as various speaker-break-in CDs, I found that the ESL-2912s sounded more open and more dynamic. I also felt that there was some warm-up effect: Before a listening session, the ...

Introduction. The “Standard Model of Fundamental Particles and Interactions” is a generalization of quantum electrodynamics (QED) in which quantum chromodynamics (QCD) is modeled as similarly to QED as possible, although QCD is still found to be incomplete. QED was initiated by Paul Dirac, who rewrote Erwin Schrödinger’s differential wave equation for a charged particle in a ...
