I have a 12/2000 manual BMW e46 328i that has a strange problem. When the engine is cold, meaning not reached its operating temperature, the car runs perfectly fine, RPMs at idle stay where

they should 650-700, and the might of the inline-six is all there. At operating temperatures, though, sometimes there is a noticeable loss of power and the car idles rough, RPMs are bouncing from 500 to 950 ...

e46 328i intermittent loss of power and rough idle when ...

4- Fuel Filter should be changed at around 60.000km, this is somewhat a preference than it is a steady interval, based on how clean the gas your filling is. Dirty fuel filters symptoms are loss of power and hesitation, a somewhat cheap part will bring your car back to life if it's been left unchanged for a long period of time.

How to keep your BMW E46 in top shape - Logicum

5 Signs Your Engine Is Losing Power. If so, you might have a power problem. Back when carburetors were king and fuel pumps were mechanical, power loss usually came down to vapor lock or a clogged fuel filter [source: Goms]. Today's intricate fuel systems have largely conquered the former if not the latter.

5 Signs Your Engine Is Losing Power | HowStuffWorks

The final reasons Fenske mentions for a loss of power have to do with fouled or otherwise degraded spark plugs and carbon deposits on the pistons, which can lead to hot-spots that cause knock, for ...

Here's How Engines Lose Power Over Time - Jalopnik

Power loss on an engine is generally due to an air problem. Check the vacuum lines on the engine to see if there are any leaks. Leaks in a vacuum line cause a car to either run too lean or rich.

Why BMW E46 is losing power - answers.com

The lack of power that you are describing, may indeed be due to a very dirty fuel filter or weak fuel pump along with many other possibilities. Let's first take a look at the whistling noise. This would typically be due to a vacuum leak in the intake system (and certainly could contribute to your lack of power issue).

BMW E36-E34 M50-M52 Loss of Power, Surging Idle, Whistling ...

All the power in the world, very smooth, very strong low end torque. When the car warms up to full operating temp, if it is very cold outside like -15C or lower it will still drive perfectly fine, but if it is not that cold out and the entire engine becomes warm it is absolutely brutish.

E46 325i issue: "pulsing" when accelerating and general ...

BMW M54B25 engine tuning. Most often to increase the power of this engine it is converted into a three-liter. For this, it is necessary to replace the crankshaft, connecting rods, injectors, ECU and the entire intake for spare parts from M54V30. In this way, you can increase the power to about 230 forces.
