The NOx conversion efficiency of the NOx adsorber over the engine map is shown in Figure 2 (data from the SwRI engine benchmarking program). The NOx adsorber reached very high conversion efficiency—at some points above 95%—but the high performance was limited to an area at low-to-medium engine speeds and loads where most of the operating points of the FTP75 cycle would occur.

The injection control pressure sensor (ICP) is an important part of the way your vehicle operates. The ICP sensor allows the injection system to operate correctly by signaling when the oil pressure is high enough so the system can receive the command that allows the injectors, pulse and the injector control to work in connection with each other.
