CHAPTER 5 CONSTRUCTION OF THE REAL NUMBERS 1 In Chapter 4 we gave a set-theoretic construction of the set w of natural numbers. In the present chapter we will continue to show how mathematics can be embedded in set theory, by giving a set-theoretic construction of the real numbers.

CHAPTER 5 CONSTRUCTION OF - people.unica.it

Description. In mathematics these days, essentially everything is a set. Some knowledge of set theory is necessary part of the background everyone needs for further study of mathematics. It is also possible to study set theory for its own interest--it is a subject with intriguing results about simple objects.

Enderton's text deals with first order-logic and a smidgin of model theory, followed by a look at formal arithmetic, recursive functions and incompleteness. A final chapter covers second-order logic and some other matters.

Similarly, the intersection of A and B, $A \cap B$, is the set of all things that are members of both A and B. Sets A and B are disjoint iff their intersection is empty (i.e., if they have no members in common). A collection of sets is pairwise disjoint iff any two members of the collection are disjoint.
