With the Cooling Channel feature, you can create channels through the mold to circulate a coolant to cool down the mold quickly and uniformly. You can create cooling channels with a counterbore, pipe thread, and an over drill to fit nearly any design requirement. You can specify the dimensions for each segment feature of the cooling channel.

The benefits of rapid heating and cooling within injection molding are well understood. Increasing the temperature of the tool to a polymer's glass-transition temperature helps achieve a high-gloss, high-quality surface finish as well as stronger weld lines, elimination of aesthetic surface defects and lower injection pressures.
