The newer DT466E/DT530E use fuel systems like the T444E (Powerstroke) whereas the old use injection pumps. Hopefully I did not confuse you too much! As for working on these engines, I have never gotten my hands on a DTxxxE but I have worked on enough of the older ag engines. They are extremely easy to work on.

Guys do swap engines but its never as easy as it seems. Transmissions, drivelines and all your electrical hookups just add to the head aches of a swap. Another thing to consider is the age of the truck. When it is time to think about replacing the 7.3 what condition will the rest of the truck be in. ... Ford F350 DT466 Conversion Theme ...

I have an 81 DT466 in my TD-15C with the ambac 100 pump. Im tossing around the ideal of switching to a P pump from a mid to late 80s engine. Reasons are for longevity and better parts availability. Any thoughts on doing this? How hard is it to do?

So; being the opportunistic individual that I am, and using what I have available, I'm interested, and have been interested for a long while, in doing a dt466 swap into my centurion. And as luck will have it, I have several good running motors (out of Case Combines, late 80's al mechanical parts) to start from.

Has anyone considered swapping in a DT 466 International medioum duty truck engine? They are about the same cubic inches, build a lot of torque and can put out up to 350 horsepower in stock configuration. Plus, they have been around since at least 1984 so there should be good availability.

The new engine crossmember can't sit in front of that or it will put the pulleys through the radiator core support. So the engine has to sit where the pickup crossmember is. I haven't got all the measurements exact yet, but it looks like the the engine will sit several inches under the dash.

This is quite a bit different than a ford app. The sae adapter for an idi does not bolt on a t444e(7.3 psd in ford speak). Being an IH app and having a sae bell and engine mounting I would skip the t444e and go directly to a dt466, might as well do it right, and it is a much easier swap if you stay mechanical.

I have thought about this swap from time to time. It could make for a very nice towing vehicle. If your goal is to have a reliable daily driver I would not worry about getting one with a p-pump. A 400hp dt466 will be making around 1000ft lbs of torque and you definitely do not need a p-pump engine to get a dt466 to 400hp.

The DT-360 would be an awesome engine for a pickup swap. My dad and I have owned a couple DT-466s and we could not ask for a better engine; the DT-360 is of similiar design. The DT-360's stroke is not all that much shorter than the DT-466, so they turn slower and produce more torque than a 5.9 cummins.
