- distinguish the structure of different types of materials
- specify the microstructure of an alloy from phase diagrams
- analyze the mechanical, magnetic, optical and the electrical properties of materials
- select materials for various engineering applications
- establish how failures occur in materials and how to prevent them.

Such a material is elastic according to the description of elasticity given earlier (immediate response, full recovery), and it is also linear in its relation between stress and strain (or equivalently, force and deformation). Therefore a Hookean material is linear elastic, and materials engineers use these descriptors interchangeably.
