Our diesel engine ECU (ECM) builds on all the unique advantages of a diesel engine, like high fuel efficiency and low CO2 emissions. Designed to ensure compliance with increasingly strict emission control regulations, it is one of the most important diesel engine electronic control systems.

**Electronic Control Units: Diesel Engine ECU - Transtron**

An engine control unit (ECU), also commonly called an engine control module (ECM), is a type of electronic control unit that controls a series of actuators on an internal combustion engine to ensure optimal engine performance. It does this by reading values from a multitude of sensors within the engine bay, interpreting the data using multidimensional performance maps (called lookup tables ...

Diesel Control ECU highly universal and able to accurately map the fuelling of most common rail diesel engines easily and non-intrusively. In addition, the Diesel Control ECU provides a host of other features that are not available in any other product, including LPG/CNG dual-fuel control and (with the addition of an optional driver) nitrous control.

Tier 4 Diesel Engine Standards And Electronic Controls. Lastly, the one major component required to meet Tier 4 standards is a sophisticated engine control system. This control system is housed in the engine control unit (ECU). This manages dozens of operating and environmental conditions in order to optimize horsepower, torque, and responses ...

#### **What Are Tier 4 Diesel Engine Standards And How Do They ...**

The basic difference between a diesel engine and a gasoline engine is that in a diesel engine, the fuel is sprayed into the combustion chambers through fuel injector nozzles just when the air in each chamber has been placed under such great pressure that it's hot enough to ignite the fuel spontaneously. Following is a [...]

#### **How Do Diesel Engines Work? - dummies**

Modern car and van engines have an electronic management system that controls fuelling. This system is run by the brain of the engine, the ECU (Engine Control Unit). When you put your foot down, the ECU decides how much fuel and air to mix, squirt into the cylinder and ignite. Diesel and petrol engines work a bit differently, but that isn't ...
