Statics is the branch of mechanics that is concerned with the analysis of loads (force and torque, or "moment") acting on physical systems that do not experience an acceleration ($a=0$), but rather, are in static equilibrium with their environment. When in static equilibrium, the acceleration of the system is zero and the system is either at rest, or its center of mass moves at constant velocity.

Friction is the force resisting the relative motion of solid surfaces, fluid layers, and material elements sliding against each other. There are several types of friction: Dry friction is a force that opposes the relative lateral motion of two solid surfaces in contact. Dry friction is subdivided into static friction ("stiction") between non-moving surfaces, and kinetic friction between moving ...

De facto, sempre que dois objetos diferentes entram em contato muito próximo, passam eletrões dos átomos de um dos objetos para o outro. O objeto que for mais susceptível a perder eletrões ficará eletrizado com carga positiva (n protões a mais) e o objeto que for menos susceptível a perder os seus eletrões ficará com a mesma carga, mas negativa (n eletrões a mais).
