### Engineering Drawing Truncated Cone

I have two cylinders. First with diameter=40cm and the second with diameter=48cm. I want to connect them with a truncated cone with height=15cm. How to calculate the angle of the cone?

In technical drawing and computer graphics, a multiview projection is a technique of illustration by which a standardized series of orthographic two-dimensional pictures is constructed to represent the form of a three-dimensional object. Up to six pictures of an object are produced (called primary views), with each projection plane parallel to one of the coordinate axes of the object.

DEVELOPMENT OF TRANSITION PIECES. Transition pieces are usually made to connect two different forms, such as round pipes to square pipes. These transition pieces will usually fit the definition of a nondevelopable surface that must be developed by approximation.

Notice that there are no dimensions as would be found in a typical orthographic working drawing. In first-angle projection, the object lies above and before the viewing planes; the planes are opaque; and each view is pushed through the object onto the plane furthest from it.

Challenged with a hypothetical engineering work situation in which they need to figure out the volume and surface area of a nuclear power plant's cooling tower (a hyperbolic shape), students learn to calculate the volume of complex solids that can be classified as solids of revolution or solids with known cross sections. This activity is suitable for the end of the second semester of AP ...

The packet capture isn't revealing anything that your dig queries did not. Reply code: No such name (3) is a longwinded way of saying NXDOMAIN (), the latter of which is more meaningful to DNS administrators. I will not remove the packet capture from your post, but it will be less of a wall of text for others to sift through if you find yourself agreeing with me on this point.

In order to improve the oilfield waste water treatment efficiency, a new type separation equipment hydrocyclone-filter is developed. With the main separating structure manufactured with PE-X series capillary material, the hydrocyclone-filter's separating capability and the relationship between the oil concentration in the filtered water and the filtering speed are all discussed in detail.

A screw thread, often shortened to thread, is a helical structure used to convert between rotational and linear movement or force. A screw thread is a ridge wrapped around a cylinder or cone in the form of a helix, with the former being called a straight thread and the latter called a tapered thread. A screw thread is the essential feature of the screw as a simple machine and also as a fastener.
