Engine blueprinting What blueprinting REALLY is. Contributed By: Enginebasics.com. I would argue that the most abused word in the engine building world is the word Blueprinting. This word is now tossed around with anyone who has a high-performance motor built these days.

**Engine Motor Blueprinting | Explaining the how to basics**

Engine blueprinting is a broad term loosely defined as bringing an engine's components to within factory specified tolerance or better. In reality, it is far more than that and author Rick Voegelin is imminently qualified to provide the low down on the basic measurement and machining techniques used to build racing and high-performance engines for optimum output.

Blueprinting is an interesting term. Almost no engine is blueprinted. Blueprinting means following a set of specs to the "T". Most serious race engines such as Indy, NASCAR, Formula 1, etc. are blueprinted engines. Most teams have several back-up engines and every single one is identical to the other in every way.

Engine tuning is the adjustment or modification of the internal combustion engine or Engine Control Unit (ECU) to yield optimal performance and increase the engine's power output, economy, or durability. These goals may be mutually exclusive; an engine may be de-tuned with respect to output power in exchange for better economy or longer engine life due to lessened stress on engine components.

**Engine tuning - Wikipedia**

Engine Blueprinting By Eddies Performance. Engine blueprinting is a standard procedure utilized at Eddies Performance machine shop. We feel Blueprinting your engine is completely nessassary to obtain maximum power and to insure the longest possible engine life and reliability.
