SOLUTIONS: PROBLEM SET 2 ELECTRIC POTENTIAL AND ELECTRIC POTENTIAL ENERGY PART A: CONCEPTUAL QUESTIONS A. Electrons are free to move in a conductor. If there was a potential difference between two points, then an electric field must exist. Charges will be pushed in this electric field, and will redistribute themselves until the electric field ...

Practice Problems: Electric Potential Solutions . 1. (moderate) An electron is moving along an E-field. If the initial K for the motion was greater than zero, describe the following parameters: ΔK , ΔU , ΔV , W field Because the field will force the electron in the direction opposite of its motion, ΔK will decrease, ΔU will increase, ΔV will decrease (as is the case whenever any particle ...

Electric Potential and Electric Potential Energy We learned that in work power energy chapter, objects have potential energy because of their positions. In this case charge in an electric field has also potential energy because of its positions. Since there is a force on the charge and it does work against to this force we can say that it must have energy for doing work.

Electric Potential and Electric Potential Energy with Examples

(This assumes the two spheres are infinitely far away from each other, so their interaction adds no additional potential energy.) Here's how I'd like to approach this problem. Start by determining the electric potential energy of a $^{235}_{92}\text{U}$ nucleus using the equation derived in part a.
