Hi Werner, Calculation view are composite views and can be used to combine other views like analytical, attribute, other calculation views & tables. This type of view is present in HANA Modelling environment. For more information check SAP HANA Modelling guide. HANA CDS (Core data services) is a layer above "pure database" in order to define semantically-enriched data models.

OK. So, maybe the title is a little misleading and before I continue, I should qualify it. You can't access any memory in ABAP. This tip can only access the current internal session, and it can only access data that is declared globally in the programs currently loaded in the internal session. Fortunately in most programs, those memory locations have a lot of data declarations.

Create SAP Dynamic Variant using Date Calculation. SAP dynamic variant creation is a must for more flexible ABAP reports that are more user-friendly. For example if SAP users are using an SAP program which displays current date's orders, in order to prevent them to choose the today's date from select screen everytime they execute the report.
