A piston is a component of reciprocating engines. It is located in a cylinder and is made gas-tight by piston rings. Its purpose is to transfer force from expanding gas in the cylinder to the crankshaft via a piston rod and/or connecting rod. In two-stroke engines the piston also acts as a valve by covering and uncovering ports in the cylinder ...

Not being able to find things in the engine bay of your car can make the repair process a baffling ordeal. Audi didn't help this any when they decided to cover everything in plastic. To alleviate this problem, I've collected some illustrations of the engine and engine bay, as well as some other helpful illustrations like belt routings.
