Statics is the branch of mechanics that is concerned with the analysis of loads (force and torque, or "moment") acting on physical systems that do not experience an acceleration ($a=0$), but rather, are in static equilibrium with their environment. When in static equilibrium, the acceleration of the system is zero and the system is either at rest, or its center of mass moves at constant velocity.

استاتیک (statics) یکی از شاخه های اصلی مکانیک است که به مطالعه اجسام در حالت تعادل می پردازد. در این شاخه، نیروها و گشتاورها را بررسی می کنند تا بتوانند شرایط تعادل را تعیین کنند.

Friction is the force resisting the relative motion of solid surfaces, fluid layers, and material elements sliding against each other. There are several types of friction: Dry friction is a force that opposes the relative lateral motion of two solid surfaces in contact. Dry friction is subdivided into static friction ("stiction") between non-moving surfaces, and kinetic friction between moving ...

Enunciado. El teorema establece que : El trabajo realizado por la fuerza neta (suma de todas las fuerzas) aplicada a una partícula es igual al cambio que experimenta la energía cinética de dicha partícula. Esto es, $\sum W = \Delta E_k$ - Este teorema es válido tanto en el ámbito de la mecánica clásica como en el de la mecánica relativista de partículas. Sin embargo, no es como lo esperabamos en la ...
