In vector calculus, divergence is a vector operator that produces a scalar field, giving the quantity of a vector field's source at each point. More technically, the divergence represents the volume density of the outward flux of a vector field from an infinitesimal volume around a given point.. As an example, consider air as it is heated or cooled. The velocity of the air at each point ...

Definizione. La divergenza è una quantità scalare che determina la tendenza delle linee di flusso di un campo vettoriale a confluire verso una sorgente o diramarsi (divergere) da essa. Tale comportamento può essere descritto considerando una regione di spazio e osservando il flusso (uscente o entrante) del campo vettoriale attraverso la superficie (chiusa) che delimita tale regione: se il ...
