Discrete time control systems. The output signal, in general, depends on the past history of the input. Transducers may be classified as analog transducers, sampled-data transducers, or digital transducers. An analog transducer is a transducer in which the input and output signals are continuous functions of time.

Discrete Time Controller Let's see what happens to the overall system when a discrete time proportional control  $u(kT) = k_p(r(kT) - x(kT))$  is added. Remember, our plant is still described by a linear differential equation (1) but now we are sensing the plant output at discrete time intervals, and changing the output at discrete intervals. We
