Geometry Word Problems: Basic Examples. If the diameter is eight feet, then the radius is four feet. The surface area of each end is given by the area formula for a circle with radius r: A = (pi) r2. (There are two end pieces, so I will be multiplying this area by 2 when I find my total-surface-area formula.) The surface area...

Geometry Problems. The study of geometry can be divided into two types: Plane Geometry and Solid Geometry. Plane geometry is about flat shapes like line, square, parallelogram, rectangle and triangle. Whereas, solid geometry deals with solid shapes like cube, cuboid, cone, prism and pyramid. Find the equation of the perpendicular line dropped...
